

FOR IMMEDIATE RELEASE

Mediture Launches TruChart Analytics Business Intelligence Solution

Technology solution drives quality improvement initiatives based on clinical and financial data.

EDEN PRAIRIE, MN, May 14, 2013 – Mediture announces the general availability of TruChart Analytics, a data warehouse platform to derive business and operational insight from data. TruChart Analytics is designed to serve the needs of organizations providing care under capitated, at risk, or bundled payment models such as Programs of All-Inclusive Care for the Elderly (PACE). TruChart Analytics works in conjunction with Mediture's EHR, Care Coordination and Health Plan management solutions. The platform collects the complex data at regular intervals and organizes the data into intuitive structures. Users access these key performance indicators to report and analyze the metrics associated with an organization's strategic goals.

Mediture's customers and the healthcare industry in general are required to achieve improved clinical outcomes while also lowering per-capita costs of care over time. On demand access to key operational and clinical data provides leaders with the insight they need to make decisions to improve their organization's performance and achieve these goals. In addition, Care Provider compensation and new payment models are increasingly tied to reporting and demonstration of measurable outcomes. TruChart Analytics is an intuitive solution that makes it easy to identify, analyze and report these outcomes. With TruChart Analytics, Mediture is adding a new capability to its industry leading product suite. This allows Mediture's customers to improve their operations and enables them to demonstrate their results to external stakeholders.

"We are confident that these new technology tools will help healthcare organizations meet financial, clinical and quality benchmarks," said Dan Vatland, Mediture CEO and President. "As EHRs and Health Information Exchanges (HIEs) become the standard in care management, it will be essential to track clinical data and report on key performance indicators to focus on delivering quality patient care and reducing costs."

The launch of TruChart Analytics extends Mediture's lead in providing unique and comprehensive solutions for the PACE market. It also establishes Mediture as the premier provider of software solutions to care organizations responsible for managing care and utilization of services.

About Mediture:

Mediture is America's largest provider of healthcare information technology for Programs of All-Inclusive Care for the Elderly (PACE) organizations, serving more than 4,500 participants in 32 PACE organizations across the country. Software and services from Mediture, including its TruChart LIFE™ Electronic Health Record (EHR) solution, empower PACE organizations to track measurable outcomes in defined timeframes for the frail senior population they serve. Mediture's solutions provide care for seniors who wish to live safely at home at a lower cost to society. Meditures technology serves PACE, Managed Long-Term Care (MLTC) programs and Fully Integrated Dual Eligible (FIDE) programs. Mediture is based in Eden Prairie, MN and is privately held.
